Furthermore, the atlas has been constructed beautifully. The authors begin with a brief verbal description of the topography of the cerebellum, using the terminology of Larsell. They then present a series of photographs of the external surface of the cerebellum, with matched, labeled drawings, in the sagittal, transverse, and horizontal planes.

The number of days between vector injections and euthanasia was: 71 (monkey 1), 85 (monkey 2), 31 (monkey 3) and 182 (monkey 4). Animals were euthanized with an overdose of pentobarbital and perfused through the heart with 4% paraformaldehyde followed by a gradient of sucrose in phosphate buffer (10, 20 and 30%).
