Autotomy (from the Greek auto-"self-" and tome "severing", αὐτοτομία) or self-amputation is the behaviour whereby an animal sheds or discards one or more of its own appendages, usually as a self-defense mechanism to elude a predator's grasp or to distract the predator and thereby allow escape. Some animals have the ability to regenerate the lost body part later.

Can Cat Worms Infect People? A disease which can be transmitted from animals to humans is known as a zoonotic disease. There are several external and internal cat parasites which are zoonotic, some of which can be more serious to humans than to their pets.. This is because humans are an abnormal host for feline parasites, so the parasites become lost and confused in a human body and do some ...
